

Evaluation of the final control (exam) at the department of Biological Chemistry for students of medical, dentistry and pharmaceutical faculties

Assessment of the exam consists of evaluation of the the multiple choice questions (mcqs) score and the theoretical questions (including practical skills).

Criteria for evaluation of mcqs:

Less than 25 tests - "**unsatisfactory**";

25 - 30 tests - "**satisfactory**";

31 - 36 tests - "**good**";

37 - 40 tests - "**excellent**".

The correct answer for 1 test makes 1 point.

The minimum score for 40 tests is 25 points.

The maximum score for 40 tests is 40 points.

Criteria for evaluation of theoretical tasks:

Each of the five theoretical tasks is estimated from 6 to 8 points:

Less than 5 points - "unsatisfactory" - the student made significant mistakes in the answers to written tasks or did not give answers at all;

5 points - "satisfactory" - the student made significant mistakes in the answers to written theoretical tasks (including practical skills);

7 points - "good" - the student made some minor mistakes in the answers to written theoretical tasks (including practical skills), or did not fully substantiate them;

8 points - «excellent» - the student comprehensively and deeply learned the educational and practical content; mastered in full theoretical knowledge and practical skills.

The minimum score for 5 theoretical tasks is 30 points.

The maximum score for 5 theoretical tasks is 40 points.

The score "**excellent**" (**75-80 points**) is obtained by the student who gave correct answers to 37-40 standardized tests, answered the written theoretical tasks (including practical skills) without errors, substantiated the results (38-40 points), ie: comprehensively and profoundly mastered the curriculum; mastered in full theoretical knowledge and practical skills.

A score of "**good**" (**62-74 points**) is obtained by a student who gave correct answers to 31 - 36 standardized tests, made some insignificant mistakes in the answers to written theoretical tasks (including practical skills), but did not fully substantiate the obtained data (31 - 37 points).

A "**satisfactory**" score (**50-61 points**) is obtained by a student who gave the correct answers to 25 - 31 standardized tests, made significant mistakes in the answers to written theoretical tasks (including practical skills) (25 - 30 points).

The assessment is "**unsatisfactory**" if the student gave correct answers to less than 25 standardized tests, made significant mistakes in the answers to written questions or did not answer at all.

The exam is considered to be passed if the student achieved at least **50 points**. The maximum score is **80 points**.
