

OBJECTIVE STRUCTURED PRACTICAL EXAMINATION
226 «Pharmacy, industrial pharmacy»

Evaluation criteria at the station OSPE №9 Clinical Pharmacy
(station name)

The grade for the part of the objective structured practical examination is determined by accessing the quality of solving the stages of the task:

№	Stages of problem's solving
1	Describing the disease: definition, symptoms and signs and evidence-based treatment's approaches.
2	Selection of the optimal medicines, type of dosage form, and route of administration for the treatment of the indicated condition.
3	Evaluation of the probability of drug interactions and side effects of medicines.
4	Justifying the influence of different factors on the effectiveness and safety of pharmacotherapy.
5	Prediction of the possible complications of pharmacotherapy and suggestion measures for prevention and/or elimination of them.

The solving of stages of tasks is estimated by points: "1" (solved), "0,5" (not completely solved), "0" (not solved). Score (in points) is determined by the multiplying the arithmetic mean of all points by a coefficient 200.
