

## The algorithm for evaluation of practical skills at stage № 8

### Execution of the disclosure of the subperiosteal abscess of the upper or lower jaw on the model

<i>№</i>	<i>Stages of performing the task</i>	<i>Criteria of evaluation</i>
1.	Preparing the student for performing the manipulation	<b>0.2 points</b> - the student correctly chose the model's position; washing hands; put on a mask, gloves and carried out their antiseptic treatment. <b>0.1 points</b> - the student washed his hands, put on a mask and gloves; did not spend their antiseptic treatment, wrongly chose the position of the model. <b>0 points</b> - the student wrongly chose the position of the model and was improperly prepared for the manipulation.
2.	Choosing the right tools and preparing them for use	<b>0.2 points</b> - the student correctly chose all the necessary tools for manipulation. <b>0.1 point</b> - student chose part of the required tools. <b>0 points</b> - the student wrongly chose the tools to perform the manipulation
3.	Performing the anesthesia	<b>0.2 points</b> - the student correctly determines the method (methods) of anesthesia, necessary during the manipulation; fully demonstrates and explains the technique of its execution. <b>0.1 point</b> - the student correctly determines the method (methods) of anesthesia, necessary during the manipulation; partly explains and demonstrates the technique of its implementation. <b>0 points</b> - the student wrongly determines the method (methods) of anesthesia to perform manipulation
4.	Technique of performing the manipulation	<b>0.4 points</b> - the student correctly names and shows on the model all stages of manipulation in the appropriate sequence. <b>0.2 points</b> - the student correctly names and demonstrates the individual stages of manipulation on the model. <b>0 points</b> - the student wrongly names and demonstrates on the model of execution of manipulation.
