INTRODUCTION
The program of study of discipline
"Pediatric infectious diseases"

according to the Standard of higher education of the second (master's) level
 field of knowledge 22 "Health Care "
 specialty 222 " General Medicine"
 educational program of master of medicine

Course description (abstract)

Course "Pediatric Infectious Diseases":

a) is based on the knowledge acquired by students in the study of medical biology, normal and pathological physiology, normal and pathological anatomy, microbiology, histology, pharmacology, pediatric disease and integrates with these disciplines;

b) lay the foundations for students to develop skills and competences that are determined by the ultimate goals of studying pediatrics as an independent discipline and can be used by students in the study of pediatrics, childhood infectious diseases and other clinical disciplines in V and VI courses and in professional activity.

Structure of the discipline	Number of credits, hours, of them				Year of study	Number Practical classes	type of control
	Total	Auditorium		Self study			
		Lectures	Practical classes				
"Pediatric infectious diseases" Content modules 3	1,0 credit ECTS / 30 hours		15	15	6 course XI / XII semester	3	credit

Auditory load – 50%, Self study– 50%

The subject of study of the discipline are the main manifestations of childhood infectious diseases, the principles of correct interpretation of clinical information obtained during examination of the patient, and the basic principles of treatment patients with infectious pathology

Interdisciplinary connections: normal anatomy, biochemistry, pathological physiology, pharmacology, pediatrics, surgery, infectious diseases, neurology. **microbiology, epidemiology, immunology.**

1. PURPOSE AND OBJECTIVES OF THE EDUCATIONAL DISCIPLINE

1.1. The purpose of teaching the educational discipline "Pediatric infectious diseases" is:

assimilation of theoretical and practical knowledge of etiology, pathogenesis, classification, clinical manifestations, methods of diagnosis, treatment and prevention of the most common non-infectious and infectious diseases of childhood and the skills of clinical, laboratory and instrumental examination of a child in compliance with the principles of medical ethics and deontology, acquisition of professional skills by the student on keeping medical records. The student's acquisition of knowledge and professional skills in the differential diagnosis of the most common non-infectious and infectious diseases of childhood, dispensary supervision of healthy and sick children in outpatient settings and the provision of emergency care for the most common emergency conditions in children based on knowledge of age-related anatomical and physiological features of the child's body;

Formation of the ability to use knowledge, abilities, skills and understanding to solve typical tasks of a doctor in the field of health care, the scope of which is provided by defined lists of syndromes and symptoms of diseases, emergency conditions, physiological conditions.

Training of a highly qualified specialist (doctor) capable of solving complex tasks and problems in the field of medicine and health care or in the process of training, characterized by the uncertainty of conditions and requirements and performing the professional activities of a doctor; capable of continuing education with a high degree of autonomy.

1.2. The main tasks of studying the discipline " Pediatric infectious diseases" are:

- Acquisition of basic theoretical knowledge of etiology, epidemiology, pathogenesis of the most common childhood infectious diseases, dispensary supervision of children who have suffered infectious diseases in outpatient settings.
- Mastering basic practical skills and abilities in diagnosis, differential diagnosis, treatment of complicated and uncomplicated forms of the course of the most

common childhood infectious diseases;

- Mastering the basic practical skills and abilities to provide assistance in emergency situations in case of childhood infectious diseases;
- Mastering the skills of maintaining medical documentation;
- Formation of students' moral-ethical and deontological qualities during professional communication with a sick child and persons who care for the child.

1.3 Competencies and learning outcomes, the formation of which is facilitated by the discipline (interrelationship with the normative content of the training of higher education applicants, formulated in terms of learning outcomes in the Standard of Higher Education).

According to the requirements of the Higher Education Standard, the discipline ensures that students acquire the following competencies:

- *integral*: The ability to solve complex problems, including those of a research and innovation nature in the field of medicine. Ability to continue learning with a high degree of autonomy.

- *general*:

1. Ability to abstract thinking, analysis and synthesis.
2. The ability to learn and master modern knowledge.
3. Ability to apply knowledge in practical situations.
4. Knowledge and understanding of the subject field and understanding of professional activity.
5. Ability to adapt and act in a new situation.
6. Ability to make informed decisions.
7. Ability to work in a team.
8. Ability to interpersonal interaction.
9. Ability to communicate in a foreign language.
10. Ability to use information and communication technologies.
11. Ability to search, process and analyze information from various sources.
12. Determination and persistence in relation to assigned tasks and assumed responsibilities.
13. Awareness of equal opportunities and gender issues.
14. The ability to realize one's rights and responsibilities as a member of society, to realize the values of a civil (free democratic) society and the need for its sustainable development, the rule of law, the rights and freedoms of a person and a citizen in Ukraine.
15. The ability to preserve and multiply moral, cultural, scientific values and achievements of society based on an understanding of the history and patterns of development of the subject area, its place in the general system of knowledge about nature and society and in the development of society, technology and technology, to use various types and forms of motor activities for active recreation and leading a healthy lifestyle.

- Professional competences of the specialty (PC):

- 1. Ability to collect medical information about the patient and analyze clinical

data.

- 2. Ability to determine the necessary list of laboratory and instrumental studies and evaluate their results.
- 3. Ability to establish a preliminary and clinical diagnosis of the disease.
- 5. Ability to determine the nature of nutrition in the treatment and prevention of diseases.
- 6. Ability to determine the principles and nature of treatment and prevention of diseases.
- 7. Ability to diagnose emergency conditions.
- 8. Ability to determine tactics and provide emergency medical care.
- 10. Ability to perform medical manipulations.
- 11. Ability to solve medical problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibility.
- 13. Ability to carry out sanitary and hygienic and preventive measures.
- 14. Ability to plan and carry out preventive and anti-epidemic measures regarding infectious diseases.
- 16. Ability to maintain medical documentation, including electronic forms.
- 21. Clearly and unambiguously convey one's own knowledge, conclusions and arguments on health care problems and related issues to specialists and non-specialists, in particular to students.
- 23. Ability to develop and implement scientific and applied projects in the field of health care.
- 24. Compliance with ethical principles when working with patients and laboratory animals.
- 25. Observance of professional and academic integrity, bear responsibility for the reliability of the obtained scientific results

Detailing of competencies in accordance with the NQF descriptors in the form of the "Competence Matrix".

Matrix of competences

№	Competence (Classification of competences according to NRK)	Knowledge Kn1 Specialized conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge	Skill/Skills Sk1 Specialized skills/problem-solving skills needed to conduct research and/or implement innovative activities to develop new knowledge and procedures Sk 2	Communication C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	Autonomy and responsibility AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches AR2 Responsibility

		and is the basis for original thinking and conducting research Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C2 Use of foreign languages in professional activities	for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities AR3 Ability to continue learning with a high degree of autonomy
--	--	--	---	--	--

Integral competence

The ability to solve complex problems, including those of a research and innovation nature in the field of medicine. Ability to continue learning with a high degree of autonomy.

Загальні компетентності

1.	Ability to abstract thinking, analysis and synthesis.	Kn1 Specialized conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	Sk1 Specialized skills/problem-solving skills needed to conduct research and/or implement innovative activities to develop new knowledge and procedures	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
2.	Ability to learn and master	Kn1 Specialized	Sk 3 The ability to solve problems in new or	C2 Use of foreign languages in	AR3 Ability to continue

	modern knowledge.	conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	professional activities	learning with a high degree of autonomy
3.	Ability to apply knowledge in practical situations	Kn1 Specialized conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	Sk 2 Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
4.	Knowledge and understanding of the subject area and understanding of professional activity	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 2 Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts	C2 Use of foreign languages in professional activities	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
5.	Ability to adapt		Sk 3 The ability to		AR2

	and act in a new situation.		solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities		Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
6.	Ability to make an informed decision.	Kn1 Specialized conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
7.	Ability to work in a team.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
8.	Interpersonal skills	Kn1 Specialized conceptual	Sk 3 The ability to solve problems in new or unfamiliar	C1 Clear and unambiguous presentation of	AR2 Responsibility for contributing to professional

		knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	knowledge and practice and/or evaluating the results of team and collective activities
9.	Ability to communicate in a foreign language.			C2 Use of foreign languages in professional activities	
10	Ability to use information and communication technologies.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C2 Use of foreign languages in professional activities	AR3 Ability to continue learning with a high degree of autonomy
11	Ability to search, process and analyze information from various sources.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 2 Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts	C2 Use of foreign languages in professional activities	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
12	Determination and persistence in relation to	Kn2 Critical understanding	Sk 3 The ability to solve problems in new or		AR3 Ability to continue

	assigned tasks and assumed responsibilities	of problems in the field and at the border of the fields of knowledge	unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities		learning with a high degree of autonomy
13	Awareness of equal opportunities and gender issues.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk1 Specialized skills/problem-solving skills needed to conduct research and/or implement innovative activities to develop new knowledge and procedures	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
14	The ability to realize one's rights and responsibilities as a member of society, to realize the values of a civil (free democratic) society and the need for its sustainable development, the rule of law, the rights and freedoms of a person and a citizen in Ukraine.	Kn1 Specialized conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	Sk 2 Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR3 Ability to continue learning with a high degree of autonomy
Special (professional) competence					
The ability to solve typical and complex specialized tasks and solve practical problems in					

professional activities in the field of health care, or in the process of learning, which involves conducting research and/or implementing innovations and is characterized by the complexity and uncertainty of conditions and requirements.

1.	Ability to collect medical information about the patient and analyze clinical data.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C2 Use of foreign languages in professional activities	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
2.	Ability to determine the necessary list of laboratory and instrumental studies and evaluate their results.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities		AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
3.	Ability to installation previous clinical diagnosis disease	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities		AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
5.	The ability to determine the nature of nutrition in	Kn2 Critical understanding of problems in	Sk1 Specialized skills/problem-solving skills needed to	C1 Clear and unambiguous presentation of	AR1 Management of work and learning

	the treatment and prevention of diseases	the field and at the border of the fields of knowledge	conduct research and/or implement innovative activities to develop new knowledge and procedures	one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	processes that are complex, unpredictable and require new strategic approaches
6.	Ability to determine the principles and nature of treatment and prevention of diseases	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
7.	Ability to diagnose emergency conditions	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
8.	Ability to determine the tactics of providing emergency medical care	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities

			social and ethical responsibilities	particular to people who are studying	
10	Ability to perform medical manipulations	Kn1 Specialized conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
11.	Ability to solve medical problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibility.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
13.	Ability to carry out sanitary and hygienic and preventive measures.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 2 Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective

				and non-specialists, in particular to people who are studying	activities
14.	Ability to plan and carry out preventive and anti-epidemic measures for infectious diseases.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities
16.	Ability to maintain medical documentation, including electronic forms.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk1 Specialized skills/problem-solving skills needed to conduct research and/or implement innovative activities to develop new knowledge and procedures	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
21.	It is clear and unambiguous to convey one's own knowledge, conclusions and arguments on health care problems and related issues to specialists and non-specialists, in	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C2 Use of foreign languages in professional activities	AR2 Responsibility for contributing to professional knowledge and practice and/or evaluating the results of team and collective activities

	particular to people who are studying.				
23.	Ability to develop and implement scientific and applied projects in the field of health care.	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 3 The ability to solve problems in new or unfamiliar environments in the presence of incomplete or limited information, taking into account aspects of social and ethical responsibilities	C2 Use of foreign languages in professional activities	AR3 Ability to continue learning with a high degree of autonomy
24.	Adherence to ethical principles when working with patients and laboratory animals.	Kn1 Specialized conceptual knowledge that includes modern scientific achievements in the field of professional activity or field of knowledge and is the basis for original thinking and conducting research	Sk 2 Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts	C1 Clear and unambiguous presentation of one's own knowledge, conclusions and arguments to specialists and non-specialists, in particular to people who are studying	AR1 Management of work and learning processes that are complex, unpredictable and require new strategic approaches
25.	Adherence to professional and academic integrity, bear responsibility for the reliability of the obtained scientific results	Kn2 Critical understanding of problems in the field and at the border of the fields of knowledge	Sk 2 Ability to integrate knowledge and solve complex problems in broad or multidisciplinary contexts	C2 Use of foreign languages in professional activities	AR3 Ability to continue learning with a high degree of autonomy

LEARNING OUTCOMES:

Distribution of learning outcomes by types of learning activities

Competencies that the applicant must master	Program learning outcomes	Names of educational disciplines, practices
GC 1 - 15 PC 1 - 3, 5 - 8, 10, 11, 13, 14, 16, 21, 23 - 25.	PLO 1 - 7, 9, 10, 12-14, 17, 18, 20 - 22, 24, 25, 29	Infectious diseases Pediatric infectious diseases

Integrative final program learning outcomes, the formation of which is facilitated by the educational discipline:

1. Have thorough knowledge of the structure of professional activity. To be able to carry out professional activities that require updating and integration of knowledge. To be responsible for professional development, the ability for further professional training with a high level of autonomy.
2. Understanding and knowledge of fundamental and clinical biomedical sciences, at a level sufficient for solving professional tasks in the field of health care.
3. Specialized conceptual knowledge, which includes scientific achievements in the field of health care and is the basis for conducting research, critical understanding of problems in the field of medicine and interdisciplinary problems related to it.
4. To highlight and identify leading clinical symptoms and syndromes (according to list 1); according to standard methods, using preliminary data of the patient's history, data of the patient's examination, knowledge about the person, his organs and systems, establish a preliminary clinical diagnosis of the disease (according to list 2).
5. Collect complaints, anamnesis of life and diseases, evaluate the psychomotor and physical development of the patient, the state of organs and systems of the body, based on the results of laboratory and instrumental studies, evaluate information about the diagnosis (according to list 4), taking into account the age of the patient.
6. To establish the final clinical diagnosis by making a reasoned decision and analyzing the received subjective and objective data of clinical, additional examination, carrying out differential diagnosis, observing the relevant ethical and legal norms, under the control of the managing physician in the conditions of the health care institution (according to list 2).
7. Prescribe and analyze additional (mandatory and optional) examination methods (laboratory, functional and/or instrumental) (according to list 4) of patients with diseases of organs and body systems for differential diagnosis of diseases (according to list 2).
9. Determine the nature and principles of treatment (conservative, operative) of patients with diseases (according to list 2), taking into account the age of the

patient, in the conditions of a health care institution, outside its borders and at the stages of medical evacuation, including in field conditions, on the basis of a preliminary clinical diagnosis, observing relevant ethical and legal norms, by making a reasoned decision according to existing algorithms and standard schemes, in case of the need to expand the standard scheme, be able to substantiate personalized recommendations under the control of the head physician in the conditions of a medical institution.

10. Determine the necessary mode of work, rest and nutrition based on the final clinical diagnosis, observing the relevant ethical and legal norms, by making a reasoned decision according to existing algorithms and standard schemes.

12. To assess the general condition of a newborn child by making a reasoned decision according to existing algorithms and standard schemes, observing the relevant ethical and legal norms.

13. Assess and monitor the child's development, provide recommendations on feeding and nutritional features depending on age, organize preventive vaccinations according to the calendar.

14. Determine tactics and provide emergency medical care in emergency situations (according to list 3) in limited time in accordance with existing clinical protocols and standards of treatment.

17. To perform medical manipulations (according to list 5) in the conditions of a medical institution, at home or at work based on a previous clinical diagnosis and/or indicators of the patient's condition by making a reasoned decision, observing the relevant ethical and legal norms.

18. To determine the state of functioning and limitations of a person's vital activities and the duration of incapacity for work with the preparation of relevant documents, in the conditions of a health care institution, based on data on the disease and its course, peculiarities of a person's professional activity, etc.

Maintain medical documentation regarding the patient and the contingent of the population on the basis of regulatory documents.

20. Analyze the epidemiological situation and carry out mass and individual, general and local prevention of infectious diseases.

21. Search for the necessary information in the professional literature and databases of other sources, analyze, evaluate and apply this information.

22. Apply modern digital technologies, specialized software, and statistical data analysis methods to solve complex healthcare problems.

24. To organize the necessary level of individual safety (own and the persons he cares for) in case of typical dangerous situations in the individual field of activity.

25. Clearly and unambiguously convey one's own knowledge, conclusions and arguments on health care problems and related issues to specialists and non-specialists.

29. Plan, organize and carry out measures for the specific prevention of infectious diseases, including in accordance with the National calendar of preventive vaccinations, both mandatory and recommended. Manage vaccine residues, organize additional vaccination campaigns, including immunoprophylaxis measures.

Learning outcomes for the discipline:

1. Identify different clinical options and complications of the most common childhood infectious diseases;
2. Plan the examination of a sick child and interpret the obtained results for the most common childhood infectious diseases;
3. Carry out differential diagnosis and make a preliminary clinical diagnosis of the most common childhood infectious diseases;
4. Determine the tactics of patient management in the most common infectious diseases of childhood;
5. Demonstrate the ability to maintain medical documentation in the clinic for children's infectious diseases;
6. Diagnose and provide emergency care in the main emergency conditions in the pediatric infectious diseases clinic (shock (TSS, hypovolemic), coma, allergic reactions, asphyxia, cerebral edema, convulsive syndrome).

2. INFORMATION VOLUME OF THE EDUCATIONAL DISCIPLINE

2 ECTS credits / 60 hours are assigned to the study of the academic discipline.

If there is a need to structure the discipline into content modules:

Content module 1. Pediatric droplet (respiratory) infections

Specific goals:

1. Determine the place of children's droplet infections in the structure of infectious diseases in children.
2. To determine the etiology, peculiarities of the epidural process, the main phases of the pathogenesis of diseases.
3. Conduct a clinical examination of a sick child, identify symptoms and syndromes that characterize an infectious disease, establish a clinical diagnosis, assess the severity of the disease, the presence of emergency conditions.
4. Draw up an examination plan, evaluate the examination results.
5. Carry out differential diagnosis.
6. Determine indications for hospitalization, prescribe treatment.
7. To draw up a plan of anti-epidemic measures in the focus of infection.

Topic 1. Differential diagnosis of infections with exanthema syndrome.

Etiological, epidemiological, pathogenetic features, leading clinical symptoms, course options and complications of infections with exanthema syndrome (measles, rubella, chicken pox, scarlet fever, pseudotuberculosis). Differential diagnosis of exanthema syndrome in various infectious and non-infectious diseases. Severe atypical forms of chicken pox. Patient management tactics, organization of anti-epidemic measures in the focus of infection in diseases with exanthema syndrome. Immunoprophylaxis.

Rubella as a TORCH infection. Clinic and prevention of congenital rubella in children.

Змістовий модуль 2. Інфекційні захворювання нервової системи

Specific goals:

1. Determine the place of infectious diseases of the nervous system in the structure of infectious diseases in children.
2. To determine the etiology, features of the epidural process, the main phases of the pathogenesis of the disease.
3. Conduct a clinical examination of a sick child, identify symptoms and syndromes that characterize an infectious disease, establish a clinical diagnosis, assess the severity of the disease, the presence of emergency conditions.
4. Draw up an examination plan, evaluate the examination results.
5. Carry out differential diagnosis with NS diseases of non-infectious origin.
6. Determine indications for hospitalization, prescribe treatment.
7. To draw up a plan of anti-epidemic measures in the focus of infection.

Topic 2.. Differential diagnosis of neuroinfections in children. Etiological, epidemiological, pathogenetic features, leading clinical symptoms and variants of the course of meningococcal, enterovirus, mumps infections, poliomyelitis. Differential diagnosis of meningococemia with diseases accompanied by hemorrhagic rash (hemorrhagic vasculitis, thrombocytopenic purpura, etc.). Aseptic meningitis in children. Differential diagnosis of serous and purulent meningitis (primary, secondary, viral, bacterial) among themselves and with other conditions. Meningeal syndrome in the clinic of infectious diseases. Issues of clinical and laboratory diagnosis of neuroinfections. Liquorological diagnosis. Differential diagnosis of encephalitis in children, classification, clinical features, diagnosis, treatment.

Emergencies in neuroinfections: toxic shock syndrome (TSS) in meningococcal infection, brain edema cerebral coma.

Content module 3. **Infectious diseases of the gastrointestinal tract and hepatobiliary system in children.**

Specific goals:

1. Determine the place of acute intestinal infections and viral hepatitis in the structure of infectious disease in children.
2. To determine the etiology, features of the epidural process, the main phases of the pathogenesis of the disease.
3. Conduct a clinical examination of a sick child, identify symptoms and syndromes that characterize an infectious disease, establish a clinical diagnosis, assess the severity of the disease, the presence of emergency conditions.
4. Draw up an examination plan, evaluate the examination results.
5. Carry out differential diagnosis with diseases of the gastrointestinal tract of non-infectious origin.
6. Determine indications for hospitalization, prescribe treatment.
7. To draw up a plan of anti-epidemic measures in the focus of infection.

Topic 3. Differential diagnosis of GIT infections in children. Etiological,

epidemiological, pathogenetic features, leading clinical symptoms and syndromes of GIT infections: local (gastritis, enteritis, colitis) and general. Clinical variants of the course of shigellosis, salmonellosis, escherichia, intestinal yersiniosis, viral diarrhea in children of different ages. Differential diagnosis of GIT infections between itself and with diseases of the gastrointestinal tract of non-infectious origin, surgical pathology. Tactics of managing children with GIT infections (diagnosis, indications for hospitalization, treatment). Anti-epidemic measures in the focus of infection. Emergency conditions with GIT infections in children (toxicosis, exicosis, hypovolemic shock, neurotoxicosis, TSS, HUS) providing medical assistance.

Differential diagnosis and emergency conditions in viral hepatitis (VH) in children. Etiological, epidemiological, pathogenetic features, leading clinical symptoms, laboratory research data depending on the causative agent of VH. Differential diagnosis of typical and atypical forms of hypertension in children. Tactics of managing a patient with viral hepatitis. Anti-epidemic measures in the focus of infection. Diagnostic markers of hepatitis.

Acute liver failure with acute hepatitis in children, clinical symptoms, assessment of the severity and prognosis of the course of hepatitis, taking into account the indicators of laboratory studies. Tactics of management of a patient with hypertension with acute liver failure syndrome. Providing emergency care.

Emergency immunoprophylaxis of VH before planned surgical interventions.

Differential diagnosis of VH with other parenchymal jaundice (drug-induced, toxic and autoimmune hepatitis, Gilbert's disease, tropical malaria, sepsis, yersiniosis, infectious mononucleosis, etc.).

Differential diagnosis with suprahepatic and subhepatic jaundice

3. STRUCTURE OF THE EDUCATIONAL DISCIPLINE

Topic	Lectures	Practical classes	SSS	Independent work (species)
Content module 1. Pediatric droplet (respiratory) infections				Self-examination of the child, identification of characteristic symptoms and syndromes of infectious diseases, evaluation of the results of laboratory studies. Justification of the clinical diagnosis. Appointment of
Topic 1. Differential diagnosis of infections with exanthema syndrome in children		5	4	
Content module 2. Differential diagnosis of neuroinfections in children.				Self-examination of the child, identification of characteristic symptoms and syndromes of infectious diseases, evaluation of the results of laboratory studies. Justification of the clinical diagnosis. Appointment of
Topic 2. Differential diagnosis of neuroinfections in children. Aseptic meningitis, encephalitis in children. Enterovirus infection, poliomyelitis. Emergency conditions in neuroinfections.		5	4	

Content module 3. Differential diagnosis of infectious lesions of the gastrointestinal tract (GIT) and hepatobiliary system in children			
Topic 3. Differential diagnosis of GIT infections in children. Emergencies with GIT infections in children. Diagnosis and treatment. Acute liver failure with hypertension in children.		5	4
Test control (format A) on the topics of classes, solving situational ones tasks		15	3
Total: ECTS credits – 1.0; hours – 30;		15	15

therapy. writing microcurriculum for the patient. Drawing up a plan of anti-epidemic measures in the focus of infection. Compilation of tables on the differential diagnosis of symptoms, individual signs, laboratory indicators of the disease. Carrying out a lumbar puncture on a mannequin. Preparation of a report for classes on the topic of independent work.

4. THEMATIC PLAN OF LECTURES

LECTURES ARE NOT PROVIDED FOR EP.

5. THEMATIC PLAN OF PRACTICAL LESSONS.

№	Topic	Hours
1.	Differential diagnosis of infections with exanthema syndrome. Rubella as a TORCH infection. Clinic and prevention of congenital rubella in children.	5,0
2.	Differential diagnosis of neuroinfections in children. Emergency conditions in neuroinfections.	5,0
3.	Differential diagnosis of GIT infections in children. Emergencies with GIT infections in children. Diagnosis and treatment	5,0
Total hours		15

1. 1. THEMATIC PLAN OF INDEPENDENT WORK OF STUDENTS

№	Topic	Hours Types of control	Types of control
1.	Differential diagnosis and emergency conditions for influenza and ARVI in	2	Current and final control

	children (influenza, parainfluenza, adenovirus, respiratory syncytial (RS), rhinovirus infection). COVID-19 in children, differential diagnosis. Differential diagnosis and emergency conditions in whooping cough.		
2.	Differential diagnosis of diphtheria of the tonsils, infectious mononucleosis and diseases accompanied by acute tonsillitis syndrome in children.	2	Current and final control
3.	HIV infection in children. Prevention of HIV infection, prevention of transmission from mother to child, diagnosis, treatment of HIV-infected children.	2	
4.	TORCH - infections in children. Leading clinical symptoms of acquired and congenital forms of toxoplasmosis, cytomegalovirus and herpes infections. Laboratory diagnostics. Patient management tactics. Prevention of congenital forms.		
5.	Whooping cough in newborns.	2

7.	Preparation for practical classes	3	Current control in practical classes
	Всего годин	15	

A student's independent work is one of the organizational forms of learning, which is regulated by the working curriculum and is performed by the student independently outside the classroom. Possible types of independent work of students:

1. Preparation for practical classes and study of topics considered only in the plan of independent work of the student, search and study of additional literature,
2. Creation of algorithms, structural and logical schemes, writing abstracts, annotations, reports and presentations for speaking with messages at practical classes, on duty at the clinic outside of school hours.

The organization of independent work in the departments of the pediatric hospital should be provided by the teachers of the department.

Independent work of students is evaluated during the current control of the topic in the corresponding lesson.

7. INDIVIDUAL TASKS (disease histories, forensic medical reports, toxicological research reports, course and diploma, master's theses)

Not planned in the working curriculum for the academic year

8. TEACHING METHODS. It is necessary to present the system of organizing classes, the use of interactive methods, educational technologies used for the transfer and assimilation of knowledge, skills and abilities.

When studying the discipline "Children's infectious diseases", various teaching methods recommended for higher education are used, namely:

- by sources of knowledge: methods of verbal transmission and auditory perception of educational information (explanation, lecture, conversation, discussion); methods of visual transmission and visual perception of educational information (showing and demonstrating slides, videos, studying literary and other sources of educational information, using visual teaching aids); methods of transmitting educational information using practical, labor actions and tactile perception of it (training tasks and creative exercises, examination of thematic patients, mastering of practical skills).

- according to the logic of the educational process: analytical (determining the general condition of the patient and the main signs of the disease), synthetic (clarifying the relationship between the main signs of diseases, determining the optimal measures for diagnosis, treatment and prevention), their combination - analytical-synthetic, as well as inductive method, deductive, their combination - traductive method;

- according to the level of independent mental activity: problematic, partially exploratory, research.

By combining and summarizing the above teaching methods, when studying the discipline, it is advisable to implement such methods of organizing educational classes as:

- method of clinical cases,
- problem-oriented method,
- the method of individual educational and research and practical tasks,
- method of competitive groups,
- method of training technologies,
- the "business game" method,
- "brainstorming" method,
- the method of conducting conferences using interactive, interdisciplinary and information and computer technologies.

Types of educational activities of the student, according to the Curriculum, are lectures, practical classes, independent work of students.

Thematic plans of practical classes and SRS ensure the implementation of all topics included in the modules in the educational process.

Practical classes are clinical, aimed at monitoring the assimilation of theoretical

material and the formation of practical skills and abilities, as well as the ability to analyze and apply the acquired knowledge to solve practical tasks, held in children's departments of the department's clinical bases.

- Each lesson begins with a test control in order to assess the initial level of knowledge and determine the degree of readiness of students for the lesson. The teacher determines the purpose of the lesson and creates positive cognitive motivation; answers students' questions that arose during SRS on the topic of the lesson.
- The main stage of the lesson consists in the student's practical work at the patient's bedside. The teacher and students make rounds of patients. Students examine sick children, collect anamnesis, examine them, perform diagnostic manipulations, etc. Control of the main stage of the lesson is carried out by assessing the student's performance of practical skills, the ability to solve typical situational tasks. The teacher discusses and gives explanations, emphasizes the peculiarities of the course of the disease in a particular child, aims at a more rational implementation of this or that examination method, etc.

In addition, practical classes include:

- planning examination of a sick child;
- interpretation of laboratory and instrumental research data;
- differential diagnosis of the most common childhood diseases with typical or complicated course;
- determination of the previous clinical diagnosis;
- determination of therapeutic tactics;
- appointment of medical nutrition;
- provision of emergency medical assistance;
- solving situational problems;
- practicing practical skills on dummies and at the bedside of a sick child;
- maintaining medical records.

Mastery of the topic is controlled in practical classes according to specific goals: the ability to determine the etiological and pathogenetic factors of childhood infectious diseases, classify and analyze a typical clinical picture, draw up an examination plan and analyze the data of laboratory and instrumental examinations in the typical course of the disease, demonstrate mastery of the principles of treatment, rehabilitation and prevention of diseases, make a diagnosis and determine the main emergency conditions, assess the prognosis of the disease, plan anti-epidemic measures in the focus of infection, demonstrate mastery of the moral and deontological principles of a medical specialist and the principles of professional subordination in pediatrics.

9. CONTROL METHODS

The section should contain an explanation of the content and technology of assessing students' knowledge, namely, a list of all types of work that a student must perform during the current, final control, independent work, individual tasks and their evaluation criteria.

The section indicates:

- Types of control (current and final)

- Final control form according to the curriculum (credit, differentiated credit, exam)
- Evaluation criteria

Types of control (current and final)

10. CURRENT CONTROL of the results of the educational activities of the students of the disciplines is carried out in order to check the knowledge, abilities and skills of the students during classroom (practical, laboratory, seminar) classes, as well as to check the results of the tasks of independent work.

The task of current control is to check the level of the student's readiness to perform specific work: assimilation of relevant educational material, acquisition of knowledge and formation of skills for solving specific issues and situations, ability to independently process texts, ability to comprehend the essence of the content of the lesson material, formation of skills to perform the necessary practical skills and manipulations, publicly or in writing to justify one's point of view, the ability to work in a team, the ability to bear responsibility for the recommendations and decisions made, etc.

Current control is carried out on the basis of a comprehensive assessment of the student's activity and acquired competencies (knowledge, abilities, skills, etc.), which includes control of the input level of knowledge, the quality of practical work, the level of theoretical training and the results of the initial control of the level of knowledge. Forms of ongoing control are determined by the department and reflected in the curriculum of the relevant discipline.

Evaluation of the current educational activity is carried out at each practical session in accordance with the specific goals of the topic on a 4-point scale using the approved evaluation criteria for the relevant discipline and is entered in the journal of academic performance. At the same time, all types of work and the list of competencies provided by the curriculum of the academic discipline and methodical development for studying the topic are taken into account. The student must receive a grade in each topic.

In all practical classes, objective control of theoretical training and acquisition of practical skills (standardized according to the implementation method) is used.

- The student answers 10-15 tests (tests on the subject of the lesson, format A)
- Answers standardized questions, the knowledge of which is necessary to understand the current topic.
- Demonstrates knowledge and skills of practical skills according to the theme of the practical session at the patient's bedside
- Solves a situational problem on the subject of the lesson.
- At the final stage of the lesson, in order to assess the student's mastery of the topic, he is asked to answer situational problems. The teacher summarizes the lesson, gives students tasks for independent work, points out key questions of the next topic and offers a list of recommended literature for independent study. Independent work of students, which is provided for in the topic along with the classroom, is evaluated during the current control of the topic in the corresponding lesson.

The duration of one practical lesson of the topic and taking into account the norms of the weekly classroom load is 6.0 academic hours.

When assessing students' knowledge, preference is given to standardized control methods: testing (oral, written), structured written works, work with standard medical documentation, standardized control of practical skills.

Control methods

Theoretical knowledge:

- written and computer testing (MISA),
- individual survey, interview,
- content-structured written works.

Practical skills and abilities:

- control of implementation of standardized practical skills, provided by the plan of practical training of the student in the discipline;
- analysis of laboratory and instrumental studies;
- performing medical manipulations in pediatrics;
- providing assistance in emergency situations in children.

11. FORM OF FINAL CONTROL OF LEARNING SUCCESS (credit).

Assessment is a form of final control, which consists in assessing the student's learning of the educational material based solely on the results of his performance of certain types of work in practical, seminar or laboratory classes according to the national scale and the ECTS scale. The final control includes a semester control and attestation of the student of higher education on the compliance of his competences with the requirements of the standards of higher education. Discipline assessment is carried out after the end of its study, before the beginning of the examination session.

In the case when a student is studying according to an individual curriculum, a separate schedule of control measures is determined for him by order of the rector. Students who have completed all types of work and tasks provided for by the curriculum for the semester in the relevant academic discipline, attended all practical training sessions provided for by the curriculum of the academic discipline, and have scored at least the minimum number of points for the current success rate are admitted to the semester final control (credit) . For students who have missed classroom training classes, it is allowed, with the permission of the dean, to work off academic debt by a certain specified deadline within the semester.

Credits are issued by teachers who conducted practical, seminar and other classes in the study group. Students receive credit if the average grade for the current academic performance during the semester is at least "3" (120 points on a 200-point scale). The entry is made in the student's record book and in the record and examination list.

Evaluation criteria. The totality of knowledge, abilities, skills, and other competences acquired by a student of higher education in the process of learning from each subject of an educational discipline is tentatively evaluated according to the following criteria:

- **5/"excellent"** – the student flawlessly mastered the theoretical material of the

topic of the lesson, demonstrates deep and comprehensive knowledge of the relevant topic, the main provisions of scientific primary sources and recommended literature, thinks logically and constructs an answer, freely uses the acquired theoretical knowledge when analyzing practical material, expresses his attitude to certain problems, demonstrates a high level of assimilation of practical skills;

– **4/"good"** – the student has well mastered the theoretical material of the class, has the main aspects from primary sources and recommended literature, explains it in a reasoned way; possesses practical skills, expresses his thoughts on certain problems, but certain inaccuracies and errors are assumed in the logic of the presentation of theoretical content or in the performance of practical skills;

– **3/"satisfactory"** – the student has basically mastered the theoretical knowledge of the educational topic, orients himself in primary sources and recommended literature, but answers unconvincingly, confuses concepts, additional questions cause the student uncertainty or lack of stable knowledge; when answering questions of a practical nature, reveals inaccuracies in knowledge, does not know how to evaluate facts and phenomena, connect them with future activities, makes mistakes when performing practical skills;

– **2/"unsatisfactory"** – the student has not mastered the educational material of the topic, does not know scientific facts, definitions, hardly orients himself in primary sources and recommended literature, lacks scientific thinking, practical skills are not formed.

The results of current control (current success rate) are an indicator of the level of students' assimilation of the curriculum and fulfillment of the requirements for independent work of students. The results of the current control are the main information for determining the assessment during the assessment.

Control works for students can be conducted in the form of testing; solving practical tasks; solving practical situations; demonstration of practical skills.

In case of missing a practical class, the student is obliged to complete it in full within 2 weeks (14 calendar days) according to the department's practical class schedule, but no later than the last day of the credit week in the corresponding semester. If a student has missed more than 3 practical classes, he must obtain permission to complete them at the relevant dean's office. The duration and criteria for evaluating students' knowledge during the practical session are the same as in the corresponding session. The teacher on duty enters a note about the completion of the practical lesson and the evaluation in the Journal of accounting for the practical lessons of the department (Appendix 2), which is the basis for recording the lesson in the Journal of attendance and student success.

The current control of the results of the tasks of independent work is carried out during the current control of the topic in the corresponding lesson.

The department informs students about the procedure, content and criteria of current control at the first lesson on the discipline.

The results of the evaluation of the student's work during the semester are documented in the Logbook of students' attendance and success, as well as entered in the credit and examination information, the student's educational card, the student's credit book. Control, individual assignments completed by students

during the semester are stored at the department for 1 year.

12. CALCULATION SCHEME AND DISTRIBUTION OF POINTS RECEIVED BY STUDENTS:

For disciplines in which the form of final control is credit:

The maximum number of points that a student can score for the current educational activity while studying the discipline is 200 points.

The minimum number of points that a student must score for the current educational activity in order to enroll in the discipline is 120 points. **The calculation of the number of points** is carried out on the basis of the grades received by the student on a 4-point (national) scale during the study of the discipline, by calculating the arithmetic mean (CA), rounded to two decimal places. The obtained value is converted into points on a multi-point scale as follows:

$$x = \frac{CA \times 200}{5}$$

For convenience, a calculation table is given on a 200-point scale:

Recalculation of the average grade for the current activity into a multi-point scale for disciplines ending with credit

4-point scale	200-point scale	4-point scale	200-point scale	4-point scale	200-point scale	4-point scale	200-point scale
5	200	4.45	178	3.92	157	3.37	135
4.97	199	4.42	177	3.89	156	3.35	134
4.95	198	4.4	176	3.87	155	3.32	133
4.92	197	4.37	175	3.84	154	3.3	132
4.9	196	4.35	174	3.82	153	3.27	131
4.87	195	4.32	173	3.79	152	3.25	130
4.85	194	4.3	172	3.77	151	3.22	129
4.82	193	4.27	171	3.74	150	3.2	128
4.8	192	4.24	170	3.72	149	3.17	127
4.77	191	4.22	169	3.7	148	3.15	126
4.75	190	4.19	168	3.67	147	3.12	125
4.72	189	4.17	167	3.65	146	3.1	124
4.7	188	4.14	166	3.62	145	3.07	123
4.67	187	4.12	165	3.57	143	3.02	121
4.65	186	4.09	164	3.55	142	3	120
4.62	185	4.07	163	3.52	141	Less than 3	Not enough
4.6	184	4.04	162	3.5	140		
4.57	183	4.02	161	3.47	139		
4.52	181	3.99	160	3.45	138		
4.5	180	3.97	159	3.42	137		
4.47	179	3.94	158	3.4	136		

Points from the discipline are independently converted both to the ECTS

scale and to the 4-point (national) scale.

Points from the ECTS scale are not converted into a 4-point scale and vice versa.

The scores of students recruited from the discipline are ranked on the ECTS scale as follows:

ECTS assessment	Statistical indicator
A	The best 10% of students
B	The next 25% of students
C	The next 30% of students
D	The next 25% of students
E	The last 10% of students

Ranking with the assignment of grades "A", "B", "C", "D", "E" is carried out for students of this course who are studying in one specialty and have successfully completed the study of the discipline. Students who receive grades of FX, F ("2") are not listed as ranked students. Students with an FX grade automatically receive an "E" grade after retaking.

The assessment of subjects, the form of final control of which is credit, is based on the results of the assessment of current educational activities and is expressed on a two-point scale: "passed" or "not passed". To enroll in a discipline, a student must receive at least 60% of the maximum number of points for the current educational activity (at least 120 points for a 200-point scale). The teacher enters the points and grade ("passed" or "not passed") in the assessment and examination list and in the student's record book (with the exception of the grade "not passed"). Points from the discipline are converted to the ECTS scale (see table). A grade of F (unsatisfactory with mandatory retake) is awarded to students who have attended all classroom classes in the discipline but have not earned the minimum number of points for the current academic activity. Such students receive a grade of "failed" and are not allowed to take the exam session.

Discipline points	Evaluation on a 4-point scale
From 170 to 200 points	5
From 140 to 169 points	4
From 139 points to the minimum number of points that the student must score	3
Below the minimum number of points that the student must score	2

Discipline points for students who have successfully completed the program are converted to a traditional 4-point scale according to the absolute criteria, which are shown in the table below:

The ECTS grade is not converted to the traditional scale, as the ECTS scale and the four-point scale are independent.

The objectivity of the evaluation of students' educational activity is checked by statistical methods (correlation coefficient between the ECTS grade and the grade on the national scale).

13. METHODOLOGICAL PROVISION (educational content (summary or extended lecture plan), plans for practical (seminar classes, tasks for laboratory work, independent work, questions, problems or cases for current and final control of students' knowledge and skills, comprehensive control work, post-certification monitoring acquired knowledge and skills in the academic discipline).

All types of educational activities have methodological support: lectures, practical classes, independent work of students.

Methodological support of the lecture course:

1. Abstracts of lectures.
2. Methodical developments of lectures.
3. Lecture presentations.
4. Video films and educational films on the topic of the lecture.

Methodical provision of practical classes:

1. Methodical development of practical classes for teachers.
2. Methodical instructions for practical classes for students.
3. Variants of test questions and tasks to check the initial level of knowledge on each topic.
4. Variants of situational tasks to check mastery of topics.
5. Variants of tasks (theoretical and practical) for final control.
6. Instructions for working with phantoms and dummies to practice practical skills.

Methodological support of students' independent work:

1. Methodical guidelines for pre-audit preparation for practical classes.
2. Workbook for pre-auditor training.
3. Methodical instructions for performing practical skills.
4. Variants of tasks for independent work of students.

The following tools are used to diagnose learning success:

1. Test tasks of format A
2. Practical tasks to check mastery of practical skills
3. Situational tasks.

The development of test-control questions, structured situational problems and practical problems used to diagnose learning success should be based on the list of questions and practical skills that the student should learn when studying in accordance with the discipline "Children's Infectious Diseases". The sets of practical tasks are formed from the list of practical skills that the student should master during the study of the discipline, which are practical works standardized according to the method of execution.
