

Propaedeutics of internal medicine is an introductory course that lays the foundations of knowledge for further study of the clinical discipline of "internal medicine".

The main goal of the teachers of the Department of Propaedeutics of Internal Discipline is to teach students the research methods necessary for the recognition (diagnosis) of diseases of internal organs. Students must learn to examine the patient independently using certain methods and identify signs or symptoms of disease (symptomatology or semiotics), group the signs of the disease detected during the examination into pathogenetically related syndromes, which is the basis for diagnosis.

Thus, at the department students take a course in the diagnosis of internal diseases, the main purpose of which is to study the methods of examination of patients, as well as semiotics and syndromes of diseases and the basics of their treatment.
