INTRODUCTION

Program of studying discipline «Ukrainian language (for foreign student

in accordance with the standard of higher education of the second (master's) level branches of knowledge 22 "Healthcare" specialty 221 «Dentistry» educational program Master of Medicine

Description of educational discipline (annotation)

The program in the discipline «Ukrainian language (for foreign students)» is designed for English-speaking foreign students of higher medical educational institutions of Ukraine III-IV levels of accreditation. The curriculum of the discipline is based on the **requirements** of industry standards of specialist training(OPP, OKH).

«Ukrainian language (for foreign students)» as a discipline:

a) provides for the formation of pronunciation of sounds and the designation of their letters, grammatical categories of different parts of the language, methods of Ukrainian word-formation, structure of various types of sentences;

b) creates a base of using a lexical minimum level of minimum communicative sufficiency serving mainly daily and socio-cultural spheres of communication;

c) lays the foundations of skills of the main types of speech activity (auditing, dialogical and monological speech, reading, writing and speaking) and the formation of minimum experience and skills of professional communication;

d) lays the basics of knowledge of medical terminology, with the prospects of their further use in professional activity.

The program is structured on content modules, topics.

According to the current curriculum«Ukrainian language (for foreign students)» is taught during the fourth semester of the 2nd year of study and has such types of classroom classes as practical classes and independent extracurricular activities of students.

The educational process is organized according to the European Credit Transfer and Accumulation System (ECTS), which is focused on the possibility of recognizing students' academic achievements, regardless of the place of study. The program of the discipline is structured into 1 content module: Professional communication. Modeling of professional medical dialogue "doctor-patient" (examination of the patient)

Results of studies:

As a result of studying of the discipline the student **must know**:

- main features of the phonetic system and articulatory base of the Ukrainian language;

-- basics of Ukrainian grammar;

- grammatical constructions and models used to characterize the subject and process on various features (composition, structure, functions, purpose, etc.);

- basics of medical terminology;

- standard (typical) models of professional dialogue "doctor-patient".

As a result of studying the discipline the student **must be able to**:

- read in Ukrainian in accordance with modern orthoepic norms Ukrainian literary language;

- write under the dictation of words, phrases and sentences;

- identify parts of speech and their grammatical features, correctly combine (coordinate) parts of speech, build simple and complex sentences;

- to hear and retell in Ukrainian the initial information on the subjects being studied;

- use grammatical constructions and models that characterize objects and processes on various features (composition, structure, functions, purpose, etc.);

- to apply standard speech models of professional dialogue "doctor-patient" in educational and real communication.

2. Information volume of the discipline

3 ECTS credits of 90 hours are allocated for the study of the academic discipline.

3. The structure of the discipline

TOPIC	Lectures	Practica l lessons (hours)	Self study (hours)	Individu al work
Content module. Professional communication. Profes medical dialogue ''doctor-patient'' (examination of th		eling		
Topic 1. Collection of anamnesis. Expression of logic and sequence of action. Verbal nouns. Ethics of a dentist.		2	4	
Topic 2. Medical history Schematic representation of the subject (document). Degrees of comparison of adjectives and adverbs. Congenital malformations of the maxillofacial area.		2	4	
Topic 3. Passport data - part of the medical history. Features of informative content of the subject. Replies to the doctor's questions to find out the general profile of the patient.		2	4	
Topic 4. Dialogue of the doctor with the patient to find out his passport data. The structure of the dialogue-questioning. Lexical work on the topic "Marital status". Simulation of dialogue-questioning with the use of given replies-answers.		2	4	
Topic 5. Filling in the passport part of the medical card using the information of the listened dialogue.		2	4	
Topic 6. Patient complaints - subjective examination of the patient. Patient questioning plan. Replicas- questions of the plan of interrogation of the patient. Patient complaints and symptoms of diseases in therapeutic dentistry.		2	4	
Topic 7. Characteristics of pain by localization, duration, changes in its intensity and intensity of its symptoms. Verbal nouns.		2	4	
Topic 8. Record data in the patient's medical card in the "History of the disease" using the dialogue of the doctor with the patient. Complaints of the patient with injuries and diseases of the maxillofacial area.		2	4	
Topic 9. Modeling the dialogue "doctor-patient" using the record in the patient's medical card to clarify passport data, patient complaints and medical history. Patient complaints and symptoms of diseases of the oral mucosa.		2	4	
Topic 10. Life history - the life story of the patient.		2	4	

The scheme of the anamnesis of the patient's life.			
Characteristics of the process by its components and			
the sequence of actions in it.

7. Individual tasks (not provided)

8. Teaching methods

The following methods and technologies are used **in practical classes**: teacher's explanations, listening to tape recordings of dialogues in Ukrainian, work with electronic dictionaries in two-way translation of texts, role-playing games.

Self study includes: preparation for tests, tests, homework, preparation and design of abstracts, translation of texts, memorization of educational material, the Internet, linguistic computer programs.

9. Methods of control

Control methods include current and final semester control.

10. Current control

This control action is carried out every lesson. The level of understanding of grammatical material by a student, the ability to formulate questions on the subject and give an answer to it, the quality of homework is marked.

Evaluation of current educational activity. In evaluating the knowledge of each topic for current educational activity the student gets marks by the 4-point (traditional) scale taking into account the approved evaluation criteria for the relevant discipline. This takes into account all types of work, provided by the curriculum. The student must obtain a mark for each topic. Evaluation forms of current educational activity should be standardized and include control of theoretical and practical skills. Marks put by the traditional scale are converted into points on a multi-point (200-point) scale.

11. Form of final control of academic performance (credit)

Semester credit – a form of the final control, which is to assess the knowledge of educational material on Ukrainian on the basis of the fulfilment of all types of educational works provided in a working curriculum. Semester credit (IV-th semester) is marked by the results of the current control.

12. Scheme of accrual and distribution of points received by students:

For subjects which have form of the final control the credit:

The maximum number of points for the subject that a student can receive for current educational activity is 200 points.

The minimum number of points that a student should collect for current educational activity to pass the course is 120 points.

Calculating the number of points is carried out on the basis of the grades received by the student on a 4-point (national) scale during the study of the discipline, by calculating the arithmetic mean (AM), rounded to two decimal places. The value obtained is converted into points on a multipoint scale as follows:

$$x = (AM \times 200): 5$$

		1			1	-		1	-	
4-	200-		4-	200-		4-	200-		4-	200-
бальна	бальна		бальна	бальна		бальна	бальна		бальна	бальна
шкала	шкала		шкала	шкала		шкала	шкала		шкала	шкала
5	200		4.45	178		3.92	157		3.37	135
4.97	199		4.42	177		3.89	156		3.35	134
4.95	198]	4.4	176		3.87	155		3.32	133

4.5	180	1	3.97	159	1	3.42	137	1		
4.47	179	1	3.94	158	1	3.4	136	1		

Перерахунок середньої оцінки за поточну діяльність у багатобальну шкалу для дисциплін, що завершуються заліком

Individual work of students is evaluated during the current control of theme on the appropriate lesson. Learning of themes which are declared only for independent work are controlled at the final control.

The maximum number of points that a student can score when taking the exam is 80.

The minimum number of points in the exam - not less than 50.

The grade for the discipline that ends with the exam is defined as the sum of points for the current educational activity (not less than 72) and points for the exam (not less than 50).

The grade for the discipline is independently converted into both the ECTS scale and the 4-point (national) scale. ECTS scores are not converted to a 4-point scale and vice versa.

The grade of students studying in one specialty, taking into account the number of scores earned in the discipline, are ranked on the ECTS scale as follows:

Grade ECTS	Statistical indicator
А	The best 10% of students
В	The next 25% of students
С	The next 30 % of students
D	The next 25 % of students
E	The last 10 % of students

Ranking with assignments of grades "A", "B", "C", "D", "E" is conducted for students of this course who study in one specialty and have successfully completed the discipline. Students who receive grades FX, F ("2") are not included in the list of students ranked. Students with an FX grade automatically receive an "E" score after retaking.

Points in the discipline for students who have successfully completed the program are converted into a traditional 4-point scale according to the absolute criteria, which are given in the table below:

Points in the discipline	Grade on a 4-point scale
From 170 to 200 points	5
From 140 to 169 points	4
From 139 points to the minimum number of points that a student must score	3
Below the minimum number of points that a student must score	2

The ECTS grade is not converted to the traditional scale, as the ECTS scale and the four-point scale are independent.

The objectivity of the assessment of students' learning activities is checked by statistical methods (correlation coefficient between ECTS assessment and assessment on a national scale).

13. Methodical support (educational and methodical developments for students, materials for independent work of students, test tasks for current and final control of knowledge and skills of students).
